## 74ALVC164245

# 16-bit dual supply translating transciever; 3-state Rev. 02 — 1 June 2004 Product da

**Product data sheet** 

#### **General description** 1.

The 74ALVC164245 is a high-performance, low-power, low-voltage, Si-gate CMOS device, superior to most advanced CMOS compatible TTL families.

The 74ALVC164245 is a 16-bit (dual octal) dual supply translating transceiver featuring non-inverting 3-state bus compatible outputs in both send and receive directions. It is designed to interface between a 3 V and 5 V bus in a mixed 3 V and 5 V supply environment.

This device can be used as two 8-bit transceivers or one 16-bit transceiver.

The direction control inputs (1DIR and 2DIR) determine the direction of the data flow. nDIR (active HIGH) enables data from nA ports to nB ports. nDIR (active LOW) enables data from nB ports to nA ports. The output enable inputs (10E and 20E), when HIGH, disable both nA and nB ports by placing them in a high-impedance OFF-state. The nB ports interface with the 5 V bus. The nA ports interface with the 3 V bus.

In suspend mode, when one of the supply voltages is zero, there will be no current flow from the non-zero supply towards the zero supply. The A-outputs must be set 3-state and the voltage on the A-bus must be smaller than  $V_{diode}$  (typical 0.7 V).  $V_{CCB} \ge V_{CCA}$  (except in suspend mode).

#### 2. **Features**

- 5 V tolerant inputs/outputs for interfacing with 5 V logic
- Wide supply voltage range:
  - 3 V port (V<sub>CCA</sub>): 1.5 V to 3.6 V
  - ◆ 5 V port (V<sub>CCB</sub>): 1.5 V to 5.5 V.
- CMOS low power consumption
- Direct interface with TTL levels
- Control inputs voltage range from 2.7 V to 5.5 V
- Inputs accept voltages up to 5.5 V
- High-impedance outputs when V<sub>CCA</sub> or V<sub>CCB</sub> = 0 V
- Complies with JEDEC standard JESD8-B/JESD36
- ESD protection:
  - HBM EIA/JESD22-A114-B exceeds 2000 V
  - MM EIA/JESD22-A115-A exceeds 200 V.
- Specified from -40 °C to +85 °C and -40 °C to +125 °C.

### 3. Quick reference data

**Table 1:** Quick reference data  $GND = 0 \ V; \ T_{amb} = 25 \ ^{\circ}C; \ t_r = t_f \le 2.5 \ ns.$ 

| Symbol                              | Parameter                                   | Conditions  | Min     | Тур | Max | Unit |
|-------------------------------------|---|---|---------|-----|-----|------|
| t <sub>PHL</sub> , t <sub>PLH</sub> | propagation delay nAn to nBn                | $C_L = 50 \text{ pF};$<br>$V_{CCB} = 4.5 \text{ V to } 5.5 \text{ V};$<br>$V_{CCA} = 3.0 \text{ V to } 3.6 \text{ V}$ | -       | 2.9 | -   | ns   |
|                                     | propagation delay nBn to nAn                | $C_L = 50 \text{ pF};$<br>$V_{CCB} = 4.5 \text{ V to } 5.5 \text{ V};$<br>$V_{CCA} = 3.0 \text{ V to } 3.6 \text{ V}$ | -       | 2.5 | -   | ns   |
|                                     | propagation delay nAn to nBn                | $C_L$ = 50 pF;<br>$V_{CCB}$ = 3.0 V to 3.6 V;<br>$V_{CCA}$ = 2.3 V to 2.7 V   | -       | 3.3 | -   | ns   |

| C <sub>PD</sub>                     | power dissipation                           | $V_{CCB} = 5 \text{ V}; V_{CCA} = 3.3 \text{ V}$  | [1] [2] |     |     |      |
|                                     | capacitance 5 V port:<br>nAn to nBn         | outputs enabled   | -       | 30  | -   | pF   |
|                                     | HAIT to HBIT                                | outputs disabled  | -       | 15  | -   | pF   |
|                                     | power dissipation                           | $V_{CCB} = 5 \text{ V}; V_{CCA} = 3.3 \text{ V}$  | [1] [2] |     |     |      |
|                                     | capacitance 3 V port:                       | outputs enabled   | -       | 40  | -   | pF   |
|                                     | nBn to nA                                   | outputs disabled  | -       | 5   | -   | pF   |

<sup>[1]</sup>  $C_{PD}$  is used to determine the dynamic power dissipation ( $P_D$  in  $\mu W$ ).

f<sub>o</sub> = output frequency in MHz;

C<sub>L</sub> = output load capacitance in pF;

 $V_{CC}$  = supply voltage in Volts;

N = total load switching outputs;

 $\Sigma(C_L \times V_{CC}^2 \times f_o)$  = sum of the outputs.

[2] The condition is  $V_1 = GND$  to  $V_{CC}$ .

### 4. Ordering information

**Table 2: Ordering information** 

| Type number     | Temperature range | Package | Package  |          |  |  |  |
|-----------------|-------------------|---------|--|----------|--|--|--|
|                 |                   | Name    | Description  | Version  |  |  |  |
| 74ALVC164245DGG | –40 °C to +125 °C | TSSOP48 | plastic thin shrink small outline package; 48 leads; body width 6.1 mm | SOT362-1 |  |  |  |
| 74ALVC164245DL  | –40 °C to +125 °C | SSOP48  | plastic shrink small outline package; 48 leads; body width 7.5 mm      | SOT370-1 |  |  |  |

9397 750 13248

 $P_D = C_{PD} \times V_{CC}^2 \times f_i \times N + \Sigma (C_L \times V_{CC}^2 \times f_o)$  where:

 $f_i$  = input frequency in MHz;

<sup>[1]</sup> The performance capability of a high-performance integrated circuit in conjunction with its thermal environment can create junction temperatures which are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed 150 °C.

9397 750 13248

<sup>[2]</sup> The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

<sup>[3]</sup> For (T)SSOP48 packages: above 60  $^{\circ}$ C the value of P<sub>tot</sub> derates linearly with 5.5 mW/K.

<sup>[1]</sup> All typical values are measured at  $V_{CCB}$  = 5.0 V,  $V_{CCA}$  = 3.3 V and  $T_{amb}$  = 25 °C.

<sup>[2]</sup> If  $V_{CCA}$  < 2.7 V, the switching levels at all inputs are not TTL compatible.

<sup>[3]</sup> For transceivers, the parameter  $I_{OZ}$  includes the input leakage current.

<sup>[4]</sup>  $V_{CCA} = 2.7 \text{ V}$  to 3.6 V: other inputs at  $V_{CCA}$  or GND;  $V_{CCB} = 4.5 \text{ V}$  to 5.5 V: other inputs at  $V_{CCB}$  or GND.

## 11. Dynamic characteristics

Table 8: Dynamic characteristics

|                                     |                                       | V <sub>CCA</sub> = 3.0 V to 3.6 V; V <sub>CCB</sub> = 4.5 V to 5.5 V                    | 2.0 | -   | 11.0 | ns   |

<sup>[1]</sup> All typical values are measured at nominal voltage for  $V_{CCB}$  and  $V_{CCA}$  and at  $T_{amb}$  = 25 °C.

 $P_D = C_{PD} \times V_{CC}^2 \times f_i \times N + \Sigma (C_L \times V_{CC}^2 \times f_o)$  where:

f<sub>i</sub> = input frequency in MHz;

 $f_o$  = output frequency in MHz;

C<sub>L</sub> = output load capacitance in pF;

V<sub>CC</sub> = supply voltage in Volts;

N = total load switching outputs;

 $\Sigma(C_L \times V_{CC}^2 \times f_o)$  = sum of the outputs.

[3] The condition is  $V_I = GND$  to  $V_{CC}$ .

<sup>[2]</sup>  $C_{PD}$  is used to determine the dynamic power dissipation ( $P_D$  in  $\mu W$ ).

### 12. AC waveforms

Measurement points are given in Table 9.

V<sub>OL</sub> and V<sub>OH</sub> are typical output voltage drop that occur with the output load.

Fig 4. Input (nAn, nBn) to output (nBn, nAn) propagation delays.

**Table 9: Measurement points**

| B port to A port | 2.7 V to 3.6 V   | 4.5 V to 5.5 V   | 3.0 V     | 1.5 V                | 1.5 V                | $V_{OL(A)} + 0.3 V$         | V <sub>OH(A)</sub> – 0.3 V  |  |  |

Test data is given in Table 11.

Definitions for test circuits:

 $R_L$  = Load resistor.

C<sub>L</sub> = Load capacitance including jig and probe capacitance.

 $R_{T}\!=\!$  Termination resistance should be equal to the output impedance  $Z_{o}$  of the pulse generator.

Fig 6. Load circuitry for switching times.

| Modifications: | <ul> <li>The format of this data sheet has been redesigned to comply with the current presentation and information standard of Philips Semiconductors.</li> <li>Table 2: VFBGA56 type added</li> <li>Table 7: Values for T<sub>amb</sub> = -40 °C to +125 °C added</li> <li>Table 8: Values for T<sub>amb</sub> = -40 °C to +125 °C added</li> </ul> |                       |               |                |                |  |  |  |
| 74ALVC164245_1 | 19980826   | Product specification | -             | 9397 750 04564 | -              |  |  |  |

| Level | Data sheet status [1] | Product status [2] [3] | Definition   |
|-------|-----------------------|------------------------|--|
| I     | Objective data        | Development            | This data sheet contains data from the objective specification for product development. Philips Semiconductors reserves the right to change the specification in any manner without notice.  |
| II    | Preliminary data      | Qualification          | This data sheet contains data from the preliminary specification. Supplementary data will be published at a later date. Philips Semiconductors reserves the right to change the specification without notice, in order to improve the design and supply the best possible product.             |
| III   | Product data          | Production             | This data sheet contains data from the product specification. Philips Semiconductors reserves the right to make changes at any time in order to improve the design, manufacturing and supply. Relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN). |

- [1] Please consult the most recently issued data sheet before initiating or completing a design.
- [2] The product status of the device(s) described in this data sheet may have changed since this data sheet was published. The latest information is available on the Internet at URL http://www.semiconductors.philips.com.
- [3] For data sheets describing multiple type numbers, the highest-level product status determines the data sheet status.

#### 16. Definitions

**Short-form specification** — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 60134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

**Application information** — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

#### 17. Disclaimers

**Life support** — These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes — Philips Semiconductors reserves the right to make changes in the products - including circuits, standard cells, and/or software - described or contained herein in order to improve design and/or performance. When the product is in full production (status 'Production'), relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN). Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
